# Logo

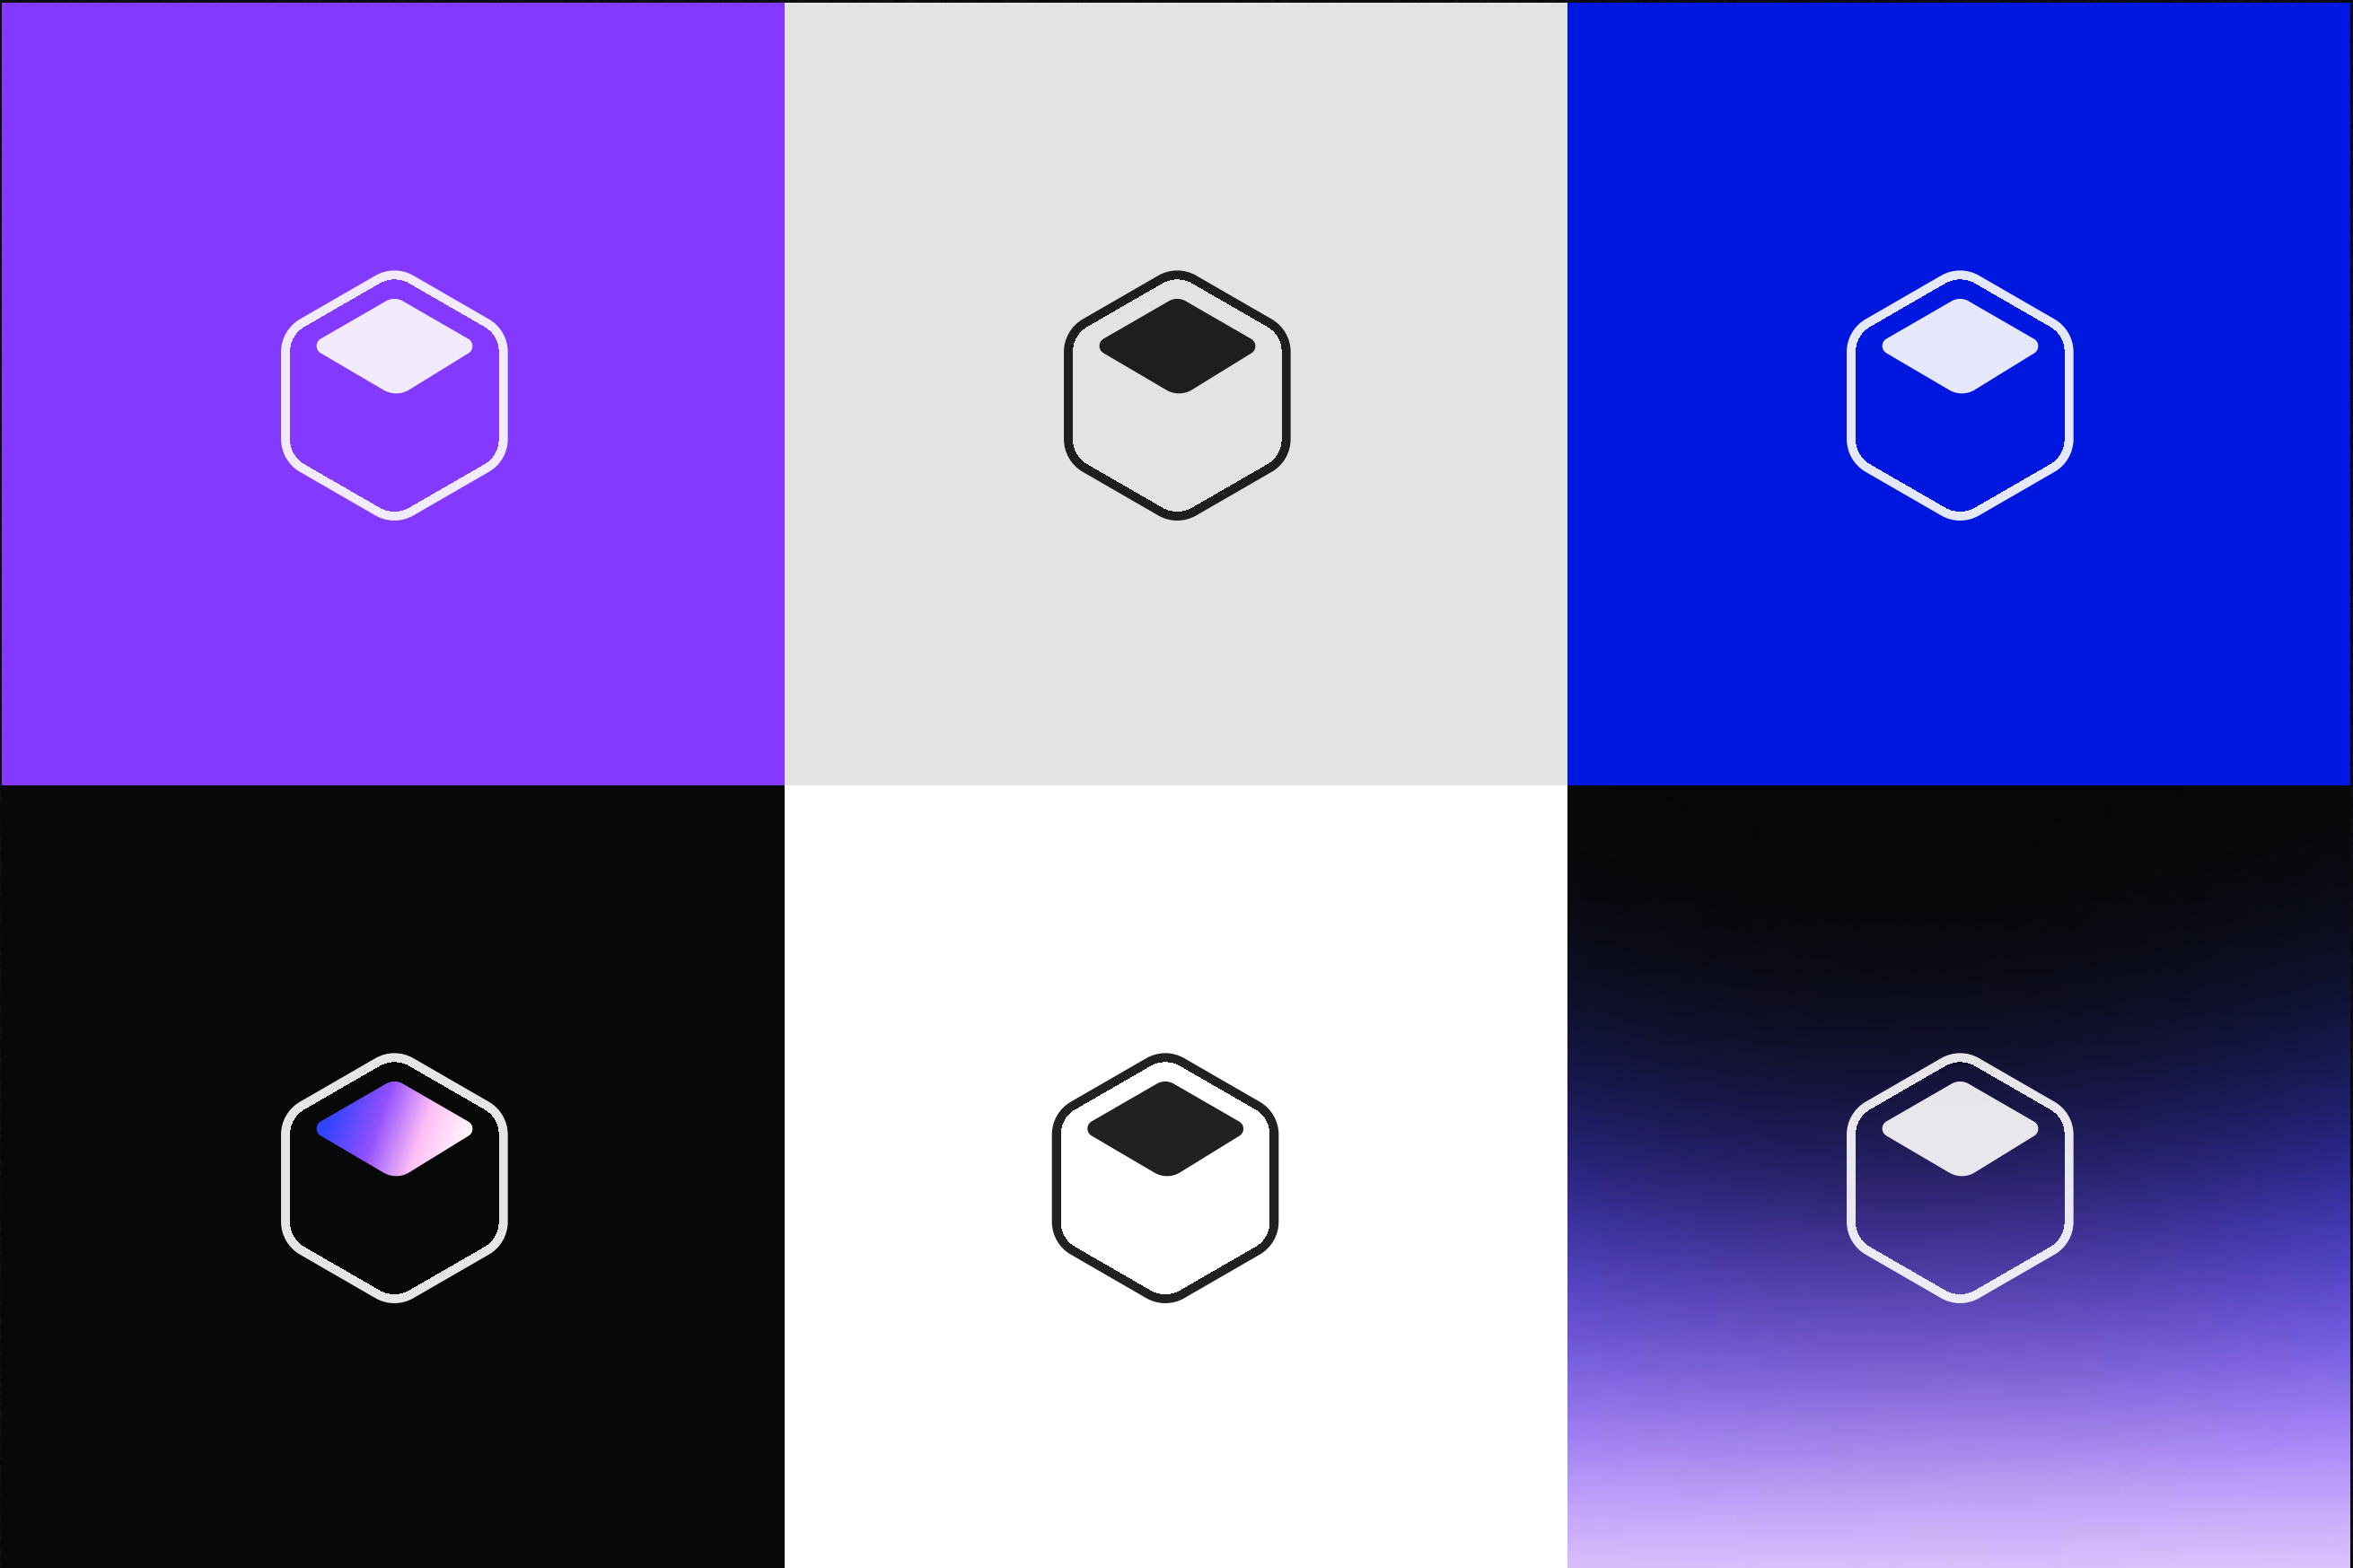

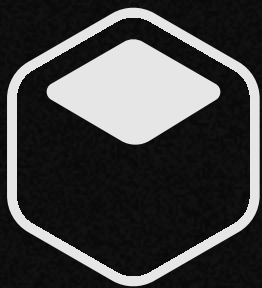

When a logo is used alongside text, it is referred to as a "logo lockup" or "logo combination." This usage is most common in situations where the brand or organization is less established or needs to provide additional context. For example, a new startup may use a logo lockup to ensure that consumers understand the brand name and what it represents.

Logo lockups are also commonly used in print and digital materials, such as business cards, letterheads, and website headers. By combining the logo with text, the brand can create a cohesive visual identity that is easily recognizable across different mediums.
